

Java

```
class Solution {  
    public int shortestPath(int n, int[][] edges, String labels, int k) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number} n  
 * @param {number[][]} edges  
 * @param {string} labels  
 * @param {number} k  
 * @return {number}  
 */  
var shortestPath = function(n, edges, labels, k) {  
  
};
```

TypeScript

```
function shortestPath(n: number, edges: number[][], labels: string, k: number): number {  
  
};
```

C++

```
class Solution {
public:
    int shortestPath(int n, vector<vector<int>>& edges, string labels, int k) {

    }
};
```

C#

```
public class Solution {
    public int ShortestPath(int n, int[][] edges, string labels, int k) {

    }
}
```

Kotlin

```
class Solution {
    fun shortestPath(n: Int, edges: Array<IntArray>, labels: String, k: Int): Int {

    }
}
```

Go

```
func shortestPath(n int, edges [][]int, labels string, k int) int {
```

}
